

HP DEHAZER

Novel formulation for improving appearance of White oil products

- Product pipelines are flushed with water during preventive or breakdown maintenance activities.
- Complete removal of water is not feasible due to operational limitations & pipeline landscape
- Residual water comes into contact with petroleum products, resulting in haziness.

Incomplete water draining in the product pipeline after maintenance

Water in dispersed form in the products

Haziness of products at receiving stations

HP DEHAZER : Helps in improving the clarity of the products

HP DEHAZER

Novel formulation for improving appearance of White oil products

- **HP** Dehazer developed by HPGRDC is a novel formulation for improving the appearance (brightness & clarity) of White oil products
- The additive aids in easy demulsification of water from HSD/MS in the tank

**HP DEHAZER @
15 ppm**

- Acts rapidly with optimized dosage
- Easy to handle
- Extensive shelf life
- High water tolerance limit
