

HP NEUTMAX SEU

Corrosion Inhibitor Formulations for SEU unit

In SEU unit, NMP removes the multi-cyclic aromatics, improving viscosity index (VI)

The SEU overhead circuit is experiencing corrosion from degraded solvent (NMP) acids, causing leaks.

The MR Lube unit relies on an imported corrosion inhibitor to mitigate corrosion.

HP NEUTMAX SEU

Corrosion Inhibitor Formulations for SEU unit

HP NEUTMAX SEU neutralizes organic acids, making them non-corrosive

Tunable Pka to match the organic acids

Reduced the Import dependency at 20 % cost of the Imported additive
